SUMMARY

Computer Science student specializing in cross-platform mobile development with expertise in Flutter/Dart and native Android (Kotlin). Proven track record building production-ready mobile applications using Clean Architecture, BLoC pattern, MVVM, and AI/ML integration. Experienced in state management (BLoC, Provider, StateFlow, Getx), RESTful APIs, Firebase ecosystem, and performance optimization across iOS and Android platforms. Strong full-stack background with Go, Python, and Node.js for building scalable backend services supporting mobile applications.

EDUCATION

University Pembangunan Nasional "Veteran" East Java

2023 - Present

Bachelor of Informatics

- GPA: 3.8/4.00 (7th Semester)

SMK Telkom Malang

2021 - 2023

Software Engineering

EXPERIENCE

Mark Design Startup (Onsite)

June 2022 - December 2022

Web Developer (Internship)

- Performed basic network troubleshooting and WiFi maintenance to support daily operations.
- Assisted in content development by creating over 15 articles for digital platforms.
- Developed a responsive company profile website using ReactJS for the frontend, NodeJS for the backend, and MySQL as the database.
- Collaborated with a 3-person design team to deliver high-quality software solutions and implement UI/UX best practices.

PT. Aksamedia (Remote)

September 2025 - July 2026

Full Stack Web Developer (Paid Internship)

- Engineered a scalable e-commerce platform using Laravel and Next.js, optimizing frontend performance.
- Integrated Doku Payment Gateway to facilitate secure and seamless transaction processing.
- Built modular UI components using React/Vue, accelerating the development of internal frameworks.
- Collaborated with senior engineers via GitLab for code reviews and version control standardization.

Looyal (Onsite)

October 2025 - July 2026

Full Stack Web Developer (Paid Internship)

Worked under Wootix, Looyal's subsidiary brand and event ticketing & management platform, as part of the core product engineering team.

- Developed an automated identity-card validation system using Python-based OCR (RapidOCR), streamlining the participant check-in process for university and school events.
- Implemented a multi-language (i18n) support system across the event creator dashboard, seat selection flow, and contact modal, and audited existing screens to catch untranslated strings.
- Integrated a third-party email validation API and a transactional email sender to improve registration data quality and delivery reliability.
- Designed and implemented event check-in configuration settings, including per-session check-in, maximum check-in count, and a configurable check-in policy, via database schema and API changes.
- Refined role-based access control for the quick-menu scan-ticket feature, hiding the action for admin accounts without scan-ticket permissions.
- Improved mobile UX for the seat-selection modal by making the save button persistently visible, reducing missed seat confirmations during checkout.
- Integrated the Google Geocoding API to convert event addresses into coordinates for map-based location features.
- Resolved UI inconsistencies such as duplicated icons on the identity-verification form and duplicate QRIS options on the payment calculator page.
- Built key platform features including an event creator dashboard and a dynamic payment calculator, and maintained type safety and backend scalability using Next.js, TypeScript, and Express.

Trading Simulation Platform

Individual Full-Stack Project | June 2025

A stock trading simulation platform utilizing a Go backend with Clean Architecture patterns, a Nuxt 3/TypeScript frontend, a MySQL database, and Redis for real-time data processing.

- Features real-time stock price updates via WebSocket, advanced order management (limit, stop-loss, OCO), and portfolio tracking with performance analytics.
- Implemented secure JWT authentication and a RESTful API architecture with over 25 endpoints.
- Utilized Redis pub/sub for real-time data and deployed using Docker containerization with a CI/CD pipeline (Jenkins, GitHub Actions).
- Optimized performance through SSR and database indexing, achieving a 40% performance improvement for query.
- stock-simulation-frontend.vercel.app

Animal Mart

Individual Full-Stack Project | May 2025

An e-commerce platform developed using a Next.js 14/TypeScript frontend, an Express.js backend, and a Firebase Firestore database.

- A complete e-commerce solution with an order management system, product reviews, a persistent cart, and an admin dashboard featuring real-time analytics and CSV export.
- Implemented JWT authentication and responsive design with React Context API for state management.
- Built a RESTful API architecture showcasing comprehensive full-stack development skills.
- animal-marts.vercel.app

Face Verification

Individual Full-Stack Mobile Project | December 2025

An enterprise-grade attendance system with real-time face recognition built using 3-tier architecture: Flutter mobile app (Clean Architecture + BLoC), Go backend (Gin + JWT), and Python face recognition service (InsightFace).

- Implemented real-time face verification with 0.7 similarity threshold using InsightFace (buffalo_l) model, achieving accurate attendance validation with dual verification flow.
- Engineered Clean Architecture with separation of concerns across Presentation, Domain, and Data layers, utilizing BLoC pattern for predictable state management.
- Built comprehensive attendance features including GPS-based clock in/out, activity history, task management, and training modules with Cloudinary CDN integration.
- Optimized performance through KeepAlive pages, RepaintBoundary, memoization, and stateless JWT authentication for horizontal scalability.
- Tech Stack: Flutter, Go (Gin, GORM), Python (Flask, InsightFace), MySQL, JWT, Cloudinary
- github.com/RizqiH/Face-verification-absen

Village Web Platform

Group Project | August 2024

Contributed to the development of a digital platform highlighting the creative initiatives of the Wersah Gang III community, showcasing local events, vision, and innovation programs.

- Built multiple sections and pages using Next.js with TypeScript and integrated an Express.js backend with Firebase for data management.
- Collaborated with a 4-person team to deliver community-focused solutions.
- arusbawahcreator.vercel.app

AuctionHub Online Auction System

Individual Full-Stack Project | May 2025

An online auction system using PHP 8.1, MySQL, and AdminLTE with multi-role authentication (Admin/Employee/User), a real-time bidding system, and a responsive dashboard.

- Implemented Docker containerization and deployment configuration, achieving 99.5% uptime.
- Developed a real-time bidding system with multi-role authentication and comprehensive management features.
- uaspemweb.wasmer.app

Muara

Group Project | June 2025 (Under Development)

An informative platform enabling users to publish critical articles and upload academic journals, supported by a team of experienced reviewers as part of the Arus Bawah Creator initiative.

- Developed using Svelte for the frontend, Go for the backend, TailwindCSS for styling, and PostgreSQL for data management.
- Features include article publishing, journal submission, peer review system, and community-driven content curation.
- Collaborated with a cross-functional team to create a platform that encourages public discourse and knowledge sharing.
- Implemented secure authentication and role-based access control for authors, reviewers, and administrators.

Lab QR Scanner

Individual Full-Stack Mobile Project | November 2025

A laboratory inventory management Android application with QR-based verification system built using Kotlin, Jetpack Compose, and Firebase ecosystem.

- Engineered MVVM architecture with Hilt dependency injection and role-based access control (Officer/Student), implementing approval workflows for borrowing and return verification.
- Integrated ML Kit Barcode Scanning and CameraX for real-time QR verification, validating item returns with automated stock management and activity logging to Firestore.
- Built comprehensive features including inventory CRUD, QR code generation, borrowing request system with 7-day limit, approval dashboard, and Firebase Realtime Database chat.
- Optimized UI with Jetpack Compose Material3, StateFlow for reactive state management, and Cloudinary integration for item photo uploads during borrowing process.
- Tech Stack: Kotlin, Jetpack Compose, Firebase (Auth, Firestore, Realtime DB, Storage), ML Kit, CameraX, Hilt, Coil, Cloudinary
- github.com/RizqiH/kotlin-peminjaman-barang-app-using-firebase

HARD SKILLS

- Programming Languages: JavaScript, TypeScript, PHP, Go, Python, Java, Dart, Kotlin
- Frontend Technologies: React.js, Next.js, Vue.js, Angular, Svelte, HTML5, CSS3, TailwindCSS, Flutter
- Backend Technologies: Node.js, Laravel, WebSocket, Flask
- Web Framework: Express.js, Gin, Fiber
- Database: MySQL, PostgreSQL, Firebase, Redis, MongoDB
- Tools & Technologies: Git, GitHub, Docker, Jenkins, CI/CD Pipeline, ORM
- Architecture & Patterns: Clean Architecture, MVC, Repository Pattern, Domain-Driven Design, Microservices, Atomic Design
- Testing & Quality: Unit Testing, Integration Testing, API Testing, Code Coverage
- Code Editor: Visual Studio Code, Android Studio, Google Colab, Xcode
- Mobile Development: Flutter (Clean Architecture, BLoC Pattern), Android Native (Jetpack Compose, MVVM, Kotlin), State Management (BLoC, StateFlow), Material Design 3

Languages: Bahasa (Native), English (Intermediate)

CERTIFICATIONS

- NodeJS Competency Certification (BNSP) - March 2023
- IT Specialist Certification in JavaScript - December 2022
- Telkom Digi Up JWD (BNSP) - November 2022
